

Getting started

MotoScan for Android

Getting the app onto your Android device:

Zebra/Symbol devices:

Open the AppGallery, install MotoScan. If the AppGallery version is not the latest, you may have to install manually or update AppGallery first

Other devices (Android phones etc):

Use manual installation (see below). Google Play availability is in preparation, and not ready yet.

Manual installation (USB connection):

Download the APK file from the MotoScan website, and run it on the device.

When installed on the device

1. Please pair your device with you profile in this configurator tool
2. In My Account, please create / write down the PIN code
3. On the device, type in your account login (example: your-email@gmail.com) and enter your PIN code

The device will now pair with your account.

On the configurator tool

1. Go to My Devices. Here you will see your paired devices.
2. Go to Configurations: A default config is made ready for you, if you are happy with that, you do not need to change anything - or you can: Add new configuration (Android icon), Build up the configuration with your needed functions, Choose the connection type, Build the menus and workflow, Save the configuration
3. Go to My Devices: The device has selected the default configuration. Change it if needed

Start using the device to capture data

If you have further questions, please look at the FAQ at the website or send us an email: motoscan@npt.dk
